

Hi!

I work as a dev at Verizon Media, specifically part of our video streaming "Uplynk" group, and we have three paid summer internships for software engineers to hire for!

The position listings are here:

Our full stack position:

https://oath.wd5.myworkdayjobs.com/careers/job/US---Salt-Lake-City/Full-Stack-Software-Engineer-Intern_JR0012741

Our back-end positions (the listings are identical, and anyone who applies for either one will be considered for both, so you can send just one or both around, whatever makes sense to you):

https://oath.wd5.myworkdayjobs.com/careers/job/US---Salt-Lake-City/Backend-Playback-Services-Engineering-Intern_JR0012746

https://oath.wd5.myworkdayjobs.com/careers/job/US---Salt-Lake-City/Backend-Playback-Services-Engineering-Intern_JR0012747

Students can apply to any of those directly, or you can even just send me resumes if that works better. The only absolutely firm requirement is that students have to be enrolled in a matriculating "related" major (generally, STEM) both before and after the internship, so no Spring 2020 grads or new incoming Fall 2020 freshmen, unfortunately. Other than that, we mostly do Python (with some front-end Javascript and such for the full-stack position), and the technology we work in is serving as the back-end for streaming video-- so, for example, TV channels that want to have their programming served online or via some sort of Apple TV/Roku/whatever.

If you need anything else or have any questions, I would be thrilled to help, just let me know!

Thanks,
Jessica
